

Partnership Proposal: Advancing Metabolic AI in Clinical Aesthetics

An exclusive strategic partnership — Healthings.ai Medilab & Idit Halperin Medical Aesthetics

Executive Summary

- Pairs the clinic's advanced aesthetic devices with continuous, **clinical-grade metabolic monitoring**.
- Exclusive integration with **Withings** — the global gold standard for at-home medical biosensors.
- A **local-first, privacy-preserving** Healthings.ai premium app acts as the clinic's digital arm.
- Positions the clinic in the **Longevity, Biohacking & Remote Patient Monitoring** markets.

The Longevity Lab Concept

Every treatment works on the body **from the outside**. To achieve a full result, the body must respond **from the inside**.

The app maintains the optimal metabolic environment so cells recover, build new collagen, and clear the released fat — turning the clinic into a true metabolic longevity lab.

Key Synergy

WITHINGS · DEVICES

HEALTHINGS.AI

HALPERIN · RESULT

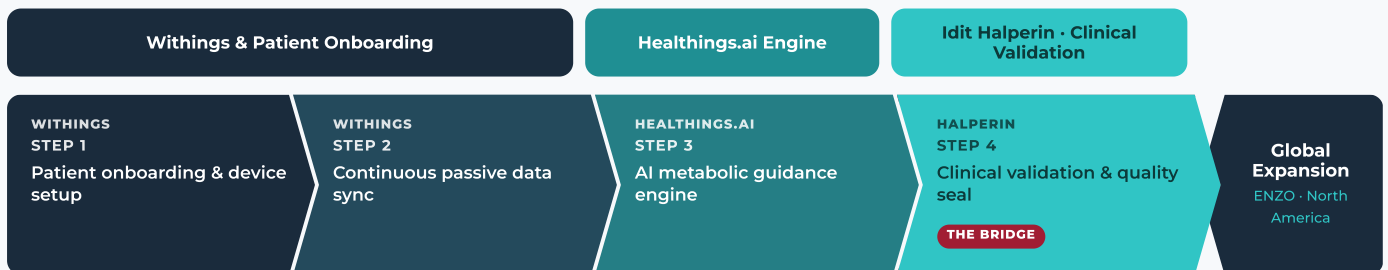

$$M_{outside} \times AI_{inside} = E$$

Advanced devices × Smart metabolic balance = Optimized effectiveness

Metabolic AI Co-Pilot for Anti-Aging

- **AI Vision meal capture:** photograph food — auto-decomposed into nutrients; flags inflammatory nutrition that harms collagen.
- **Passive Withings sync:** segmental body composition, resting HR, sleep quality and cardiovascular metrics.
- **CGM glucose monitoring:** prevents the glycation that stiffens collagen and elastin fibers.

Clinical Integration Path

Steps 1–2 sit with **Withings & patient onboarding**; Step 3 is our **Healthings.ai engine** working in the background. **Step 4 — Idit's clinical validation — is the single bridge that triggers the ENZO North-America expansion.**

The Winning Business Model

- **Zero development cost:** we build and support the technology; you act as clinical Product Owner.
- **Premium packages:** sell the app inside your leading treatment series (e.g. "Sculpting & Metabolic Lab").
- **Patient-owned hardware:** patients buy Withings directly — no inventory or logistics risk for the clinic.

Next Steps

- Establish the world's first **Alpha Site** and scientific proof-of-concept at the clinic.
- Validate real-world field results and earn the clinical "quality seal".
- Activate our North American partner (**ENZO**) to scale the proven model to thousands of aesthetic & wellness clinics.
